

GUARD & HAND RAILS

An extensive range of hand and guard rail systems are available to order on an indent basis.

- Lightweight tubular structures constructed with galvanised steel pipes and iron FastClamp® fittings
- Large variety of fittings available, allowing many different configurations of the railing systems
- Quick and easy installation without the need for on-site welding
- Sloped guard rails with vertical uprights available for slopes angled between 0° to 11° and 30° to 45°
- Straight and level guard rails available, and can be installed on top of sleeper walls
- Self-closing gates can be included as part of a level guard rail system

For more information, please refer to the Modular Structures & Guardrail Fittings product catalogue or contact SVC.
