

KERBING & SLEEPERS

Thoughtful consideration of bordering and earth retention solutions can set certain atmospheres within a landscape.

The introduction of kerb and bordering solutions can smarten up the appearance of roads, gardens, parks and nature strips. The neat, straight lines of kerbs and sleepers bring visual attention to the area that is being bordered.

Additional to their functionality in drainage, separation, pavement strengthening and debris and earth retention, kerbs and sleepers also present opportunities for designers to add unique landscape design features.

A range of standard kerb units and sleepers are readily available. Custom kerbing and sleeper units are manufactured to order in a variety of sizes, colours, finishes and special surface treatments.

Clockwise from top left:

- Concrete sleepers with a timber grain finish
- Garden bed edging solution
- A wall built from concrete sleepers
- A multi-functional bordering and seating solution at a school oval
- Patterned block and kerbing units at Halley Park, Bentleigh
