

SVC Environmental & Sustainability Policy

This policy applies across all SVC Products Pty Ltd operations, including Anston Architectural, and all sites and departments.

SVC is committed to conducting our business operations sustainably and to reducing our environmental impact.

Top management at SVC Products has defined this policy to ensure its relevance across our operations and will support and be responsible for communicating this policy across all operational departments of the business, and to our shareholders and interested parties.

This is done by ensuring:

- That we comply with all applicable environmental laws, regulations and permits, and our other compliance obligations, including customer and contract requirements.
- That we continue to work in line with this policy, our environmental procedures and identify and monitor our environmental aspects and impacts across the business's operations, including water use and washout, concrete slurry, dust, noise, energy use and waste.
- We continue to identify, set measurable objectives, and implement controls that are effective in monitoring and reducing the release of pollutants to the environment (such as air, water, and soil) from our operations.
- To monitor our Environmental processes, continue to identify and mitigate risk, and ensure that all associated extensions of the business meet the expectations of regulations and meet the requirements of ISO 14001:2015 environmental management systems.
- We protect the environment and prevent pollution, ensuring through assessment and reporting that our mechanisms are in place to eliminate or where reasonably practicable, significantly reduce environmental impact and pollution.
- That we consider climate change as part of our context, risk assessment and environmental planning.
- To support and encourage sustainable alternatives within our production and manufacturing processes.
- To communicate our commitment to environmental protection with our employees, customers and interested parties.
- That we identify nonconformities and incidents, take corrective action, and continually improve our environmental management system to enhance our environmental performance.
- We continue to provide resources to re-use, recycle the materials and consumables accumulated through our business practices.

This policy is to be reviewed annually, or in the event of a change to our environmental processes and objectives which may impact this business, or our environment. This ensures that our policy remains relevant to the activities, products, and services of our business.

SVC accepts responsibility for implementing and maintaining this Environmental & Sustainability policy and will support continual improvement across our operations and management systems.

SVC Products invites worker consultation across any of our policies and procedures.

Shane Shepherd
